

product.graphql(typeDef)

```
13  type properties{
14    name:String
15    values:[String]
16  }
17
18  extend type StoreProduct {
19    customData: [properties]
20  }
```

product.ts (resolvers)

```
1  import type { StoreProductRoot } from '@faststore/core/api'
2
3  const productResolver = {
4    StoreProduct: {
5      customData: (root: StoreProductRoot) => {
6        return root.isVariantOf.properties
7      }
8    }
9  }
10
11  export default productResolver
```

ServerProduct.ts (fragments)

```
import { gql } from '@faststore/core/api'

const gqlInput = `
  fragment ServerProduct on Query {
    product(locator: $locator) {
      customData
    }
  }
`

export const fragment = gql(gqlInput)
```
